

Biodiversity

- Provides raw materials for industry
- processes wastes and purifies air and water
- stabilises climate
- gives us cultural and aesthetic pleasure.
- Biodiversity is being lost – species are going extinct – at an unprecedented rate globally, nationally and locally, because of human activity.

Biodiversity

- Through small but important actions, UK businesses can help to halt and reverse this decline. Making a real commitment to action on biodiversity can have multiple benefits for business. It can help organisations not only to avoid fines and manage risk, but also to create competitive edge, enhance reputation, retain investment and attract staff.
